

# Save the planet

Recycle more! Like plastic, metal, glass and paper. So our oceans won't have rubbish in them.

This is what our planet might all look like if we carry on like this. So recycle more and don't chuck rubbish in the sea.

This what could happen to all of our animals and we could be eating plastic.

If we keep on using can holders more turtles will swim onto them and never get out and grow around so it gets tighter and tighter.

Use solar panels

Be more sustainable in the future
